

# Be Secure - Keep Your Browser Updated!

As technology has evolved, web browsers have become more integral to our daily work. Whether you're checking email, banking, entering grades, updating your time card, or interacting with a University system, your browser is an important element in your productivity.

Like your computer's operating system, browsers can have vulnerabilities that can be exploited, putting you and your data at risk. That's why it's so important to keep them updated.

Keeping your browser updated has many benefits, including protections against malware, adware, phishing, and identity theft. Many updates are issued with the sole purpose of addressing the latest threats. When you update, you'll also benefit from the latest innovations in web design and display.

Best of all, updating your browser usually takes less than sixty seconds! In most cases, you don't even have to close your tabs, the update will refresh them for you.
